About a Clueless Boy and Girl Voice-Over in Romantic Comedy Today

When I wrote Invisible Storytellers in the mid-1980s, romantic comedy was not one of the genres that leapt out at me. Noir, of course, with its use of first-person detectives; adaptations of famous novels replicating the narrator’s commentary (whether first-person or third); semi-documentaries and epics with their god-like scene-setters—all appeared more prominent. When I look back at my now woefully inadequate filmography, compiled in the dinosaur days of modest VHS inventories and before people posted scripts on-line or sites streamed movies, I do spot a few romantic comedies. However, none of these occur during the golden age of screwball comedies in the thirties and the forties, when The Awful Truth (1937), Bringing Up Baby (1938), His Girl Friday (1940) and other classics appeared. And indeed, having now taught and written about romantic comedy for many years, I know that screwballs avoided voice-over, as did most of the canonical romantic comedies in the following decades. Adam’s Rib (1949) doesn’t need it; Roman Holiday (1953) uses a fake newsreel to set the scene; Some Like it Hot (1959) eschews it, as does Pillow Talk (1959). You won’t find voice-over in my feminist favorite, Desperately Seeking Susan (1985), nor in the smash hits late in the century, such as Moonstruck (1987), When Harry Met Sally (1989), French Kiss (1995), While You Were Sleeping (1995), or One Fine Day (1996).

However, voice-over has become—to varying degrees, and for different purposes—a staple element of contemporary romantic comedies, including Clueless (1995), The Opposite of Sex (1998), There’s Something About Mary (1998), Notting Hill (1999), High Fidelity (2000), What Women Want (2000), Bridget Jones’s Diary (2001), About a Boy (2002), Eternal Sunshine of the Spotless Mind (2004), Bridget Jones: The Edge of Reason (2004), Wimbledon (2004), Hitch (2003), Wristmen (2007), Sex and the City (2008), and (500) Days of Summer (2009). To figure out why, we have to think carefully about this genre’s mixture of romance and comedy and how these films have changed alongside changing social mores. Moreover, we need to consider the two particular advantages of using this narrative technique: providing us unique opportunities for intimacy because of its ability in offering insight into characters’ minds, and creating irony through the clash of verbal comments with the visual track.

Before we can understand this recent adoption of voice-over, however, we should quickly contextualize romantic comedy’s characteristics, themes, narrative structure, and history. Because they treat interpersonal relationships, these films (as I noted in Overhearing Film Dialogue) privilege talk, not action. The scripts of conventional romantic comedies center the leading man and starring woman with friends and confidantes so that they can discuss their initial hatred of, or growing attraction to, the person they’ve met. In The Awful Truth, Lucy (Irene Dunne) talks to her aunt Patsy. Kathleen Kelly (Meg Ryan) talks to her employees at The Shop Around the Corner in You’ve Got Mail (1998). “Aw, Ma, I love him awful,” says Loretta (Cher), to her mother (Olympia Dukakis) in Moonstruck. If on-screen, diegetic dialogue can provide us access to the character’s emotional journey from loathing to love, voice-over’s special creation of intimacy and revelation of character interiority may not be needed.

A more important factor stems from romantic comedies’ typical narrative structure. Romantic comedies trace the formation of the couple. In their most classic form, the filmmakers focus first on one side of the couple, then on the other. This creates a characteristic structure that Rick Altman, regarding musicals, terms “dual focus” (16-58). In a dual focus film, scenes centring on one lover alternate with parallel scenes focused on the other. For example, in Pillow Talk, we see scenes of Brad Allen (Rock Hudson) in his
The Voice-Over

The Return to Dual Focus in When Harry Met Sally (1989)

and Manhattan (1979), both of which mostly centre on the characters he plays (Alvy and Isaac) and do not give equal time or attention to his lovers. Allen's voice-over engages us in his thoughts and struggles and makes us sympathize with him when he is left alone.

However, in hindsight, I see Billy Wilder as the precursor of the "nervous romance." To switch for a second from genre theory to an auteurist lens: Wilder loved voice-over, using it notably in his noirs Double Indemnity (1944) and Sunset Blvd (1950). It also crops up—serving a variety of purposes—in his romances, The Seven Year Itch (1955), Love in the Afternoon (1957), and The Apartment (1960). The Apartment, which also features first-person voice-over by a schlumelig character, ends happily...but just barely, because Bud (Jack Lemmon) has thoroughly compromised himself by renting out his apartment to his bosses for extra-marital liaisons, and Ethel (Shirley McLaine), an elevator girl so mistreated by one of these philanders that she tries to commit suicide, almost miss one another. The Apartment and the Woody Allen films tie viewers tightly to Bud, Alvy, and Isaac: we have less access to the women's feelings or emotional development.

In the late 1980s, with the appearance of When Harry Met Sally and Pretty Woman (1990) and the genre's resurgent box office popularity, scholars identified a cluster of films they termed the "reaffirmation of romance" (Evans 188) and made them feel so deeply reaffirming the filmmakers' return to dual focus: we see scenes of Harry alone and then scenes of Sally alone and then scenes of them together, tied forever by a final declaration of undying love. However, as Frank Krutnik wrote in his 1998 "Love Lies: Romantic Fabrication in Contemporary Romantic Comedy," these "new romances" hinged upon the viewer's suspension of disbelief: "These films propose that it is better to believe in a myth, a fabrication, than have nothing" (30).

As the genre continued through the 1990s and the 2000s, and as divorce rates continued to rise while more and more people stayed single for longer in their lives, the myth became harder to believe. Finding the "true love" that the movies dangle seems so difficult—if not a cruel sham. Filmmakers have captured these doubts and anxieties in a cluster of recent films that focus on bewilderment, unhappiness, and the sometimes dawning hope. Leger Grindon refers to these latest films as romantic comedies of "ambivalence" (26). Many are single focus and rely on voice-over. The lover appears late in the film, if at all, and viewers never get access to him or her the same way they observe the protagonist. He or she becomes something of a cipher, and due to the intimacy between the protagonist and us provided by his or her narration, we feel no guarantee that the romance will come to a happy conclusion. Let's look through some representative films from this cluster to see if commonalities appear in their use of voice-over.

GE4.1. Marriage rates are generally declining

GE4.2. Divorce rates are generally rising

I. The British Films

Annabelle Roe calls attention to the key role played by one British production company, Working Title, in a spate of recent romantic comedies (79-91). Voice-over is part of its house style. High Fidelity (total US box office gross $27,000,000; All box office figures from Box Office Mojo) is an adaptation of a first-person novel by Nick Hornby directed by Stephen Frears and adapted for the screen by D. V. DeVincenzo. The protagonist Rob (John Cusack) opens the film by speaking directly to the camera:

Rob: What came first, the music or the misery? People worry about kids playing with guns, or watching violent videos, some sort of culture of violence will take them over. Nobody worries about kids listening to thousands, literally thousands of songs about heartbreak, rejection, pain, misery, and loss. Did I listen to pop music because I was miserable? Or was I miserable because I listened to pop music?

He doesn’t understand why his live-in girlfriend, Laura (Iben Hjejle), has broken up with him, and he recounts to us the four previous breakups that affected him deeply. Initially, we only see the women through his narration and warped perspective, but ultimately he decides to revisit each of them to discover why the relationships failed. The film has us witness Rob’s journey towards maturity. We serve as his confidante; until he revisits former girlfriends, their motivations are just as mysterious to us as their actions were to him. Throughout the story, Rob, and not Laura, dominates our attention. Note that the film’s poster design includes nine images of Cusack’s character, and none of his girlfriends.

About a Boy ($41,000,000), directed by Chris and Paul Weitz and scripted by Peter Hedges, is another adaption of a Hornby novel. Starring Hugh Grant as Will, this story softens the main character dramatically. The movie, again, eschews giving the woman equal time. At least Laura appears in the first scene of High Fidelity, whereas Rachel (Rachel Weisz), Will’s eventual love interest, doesn’t even appear until after the乡村, he grows out of his self-centeredness, and even risks humiliation to rescue Marcus at a school performance. The ending Christmas luncheon demonstrates that Will has opened his life to others and Marcus now has a larger support group. Happily sitting on Will’s couch, surrounded by friends, lovers, and family, each narrates his new contentment. The sequence begins with a mid-shot of Will watching TV alone.

Will: The thing is, a person’s life is like a TV show. I was the star of “The Will Show.” And “The Will Show” wasn’t an ensemble drama. Guests came and went, but I was the regular. It came down to me and me alone. If Marcus’s mum couldn’t manage her own show, if her ratings were falling, it was sad, but that was her problem. Ultimately, the whole single mum plotline was a bit complicated for me.

Will’s isolation has cut him off real people and real suffering. However, as the film proceeds, through the example of Marcus’s selflessness and through Will’s falling in love with Rachel, Will grows out of his self-centeredness, and even risks humiliation to rescue Marcus at a school performance. The ending Christmas luncheon demonstrates that Will has opened his life to others and Marcus now has a larger support group. Happily sitting on Will’s couch, surrounded by friends, lovers, and family, each narrates his new contentment. The sequence begins with a mid-shot of Will watching TV alone.

Will: Every man is an island. I stand by that. [Rachel comes into the shot and kisses him. Then the shot widens to show that Marcus and Rachel’s son are sitting next to him.] But, clearly, some men are island chains. Below the surface of the ocean, they are actually connected...

II. American Films

Three high-budget, big box office films vary widely in how integral voice-over is to their scripts. There’s Something About Mary ($176,000,000), written by John Hamburg and directed by Tom Shadyac, centers on the unsuccessfully married Charlie McCarthy, who earnestly starts with Ted (Ben Stiller) retelling in voice-over to his psychiatrist the story of his blighted high school prom date with Mary (Cameron Diaz) and how he’s been in love with her ever since. What Women Want ($183,000,000), directed by Nancy Meyers, also begins with voice-over; in this case with Nick’s (Mel Gibson) ex-wife, Gigi (Lauren Holly) speaking. However, Gigi merely serves as a surrogate to explain Nick’s childhood. Raised by a Las Vegas Strip pet, Nick is a terrible chauvinist and womanizer who never listens to women until he undergoes a life change when a
freak electrical accident makes him able to overhear wom-
ens’ thoughts. *Hitch* ($179,000,000), written by Kevin Bisch and directed by Andy Tennant—note the movie’s single
focus title—uses the protagonist’s voice more sub-
stantially. It starts with Alex Hitchens (Will Smith) doling
out to men, whether in the film or in the audience, his rules
about love and life because his heart was broken in college.
Soon enough, however, Hitch gets entangled with the tabloid journalist, Sara, played by Eva Mendes. Despite presenting scenes
showing Sara alone, à la Will’s nomenclature, we could call
this movie, “The Hitch Show.”

These films, and most of the British examples discussed
earlier, suggest a pattern. They centre on men’s journey
towards greater sensitivity, emotional commitment, and marriageability. Although Four Weddings and a Funeral
(1994) and Ghosts of Girls’ Past (2009) don’t use voice as
their basic storyline, these thematic similarities provide plausibility to the conclusions of the psychologist Amy Shalet who argues that changes in
women in the 21st century?
ment of her powers. Writer/director Amy Heckerling cre-
attracts humor and disjunction with high culture by employing
a unique and unusual verbal idiom, “Valley Girl Speak.” In
Cher’s (Alicia Silverstone) practice, Valley Girl speech relies
not only on “like,” but incorporates *certain* references to pop culture and buzz words. As Nora Lovotti notes in her
thesis, ‘Cher’s narration often includes phrases such as ‘the
burp,’ ‘snaps,’ ‘eww’ and ‘mental.’” More than that, Cher’s
voice-over and the camera has a teasing, interdependent
relationship (13). After we see a montage of happy, laugh-
ing teenagers, Cher begins narrating:

Cher: So, OK, you’re probably thinking, “Is this, like,
a Noxzema commercial, or what?” But seriously, I ac-
tually have a way normal life for a teenage girl. I mean
I get up. I brush my teeth, and I pick out my school
clothes. After the last line, the camera shows Cher matching her
skirt and top through a complicated computer program of
choices—definitely not the normal method by which most
girls pick out their clothes. The disjunction between the
visual and aural track above poses fun at Cher the shop-
holic, but the example below, after Cher has matured, pokes
fun at audience assumptions, or the “horizon of
expectations,” this time in a more fundamental way. The
80s hip-hop song, “Hips Don’t Lie” serves up a

Cher: If you’re one of those people who don’t like
movies where someone you can’t see talks the
whole time and covers up all the holes in the plot and
at the end says, “I was never the same again after that
summer” or whatever, like it was so deep they can’t
stand it, then you’re out of luck. Things get very com-
plicated here very quick. And my guess is you’re not
gonna be up to it without me talking.

Cher breaks in with narration throughout the compli-
cated story that follows, involving multiple characters and
relationships—some straight, but most homosexual—often
with caustic remarks about the other characters. But in the
end, when she has given up her out-of-wedlock baby to her
nurturing older half-brother and is trying to flee the town,
she sits down to ponder:

Dedee: If I was never the same again after that
summer... or whatever, like it was so deep they
 can’t stand it, then you’re out of luck. Things get very
comlicated here very quick. And my guess is you’re not
gonna be up to it without me talking.

learned there are no miracles. There's no such thing as Fate. Nothing is meant to be. He knew; he was sure of it now. He was almost sure.

The narrator speaks not from a position of knowledge, but as a conduit of free indirect discourse of Tom's doubts and feelings. The irony, again, is delicious.

III. Popular Music Scores

Many critics discuss the use of popular songs in romantic comedies since the new romances of the late 1980s (Garwood 282-298). These songs prime our romantic longings, their familiarity rouses our nostalgia for a time when love was simple and more assured, and they cross-promote the film. Re-watching several romantic comedies for this essay, however, I am struck by how often the songs serve as comments of a third-person narrator addressing the audience. The connection between pop songs and the character's innermost feelings shouts at us in 10 Things I Hate About You (1999), when Patrick (Heath Ledger) sings on-camera, “Can’t take my eyes off of you” to Kat (Julia Stiles).

But if the pop songs can serve as first-person narration, they can also assume the functions of extra-diegetic commentary. “Pretty woman, walking down the street” might be sung by a character whose presence is not necessary or even to multiple storyline romantic comedies such as 10 Things I Hate About You (1999) and Sleepless in Seattle (1993), where the Italian song, “la vie en rose,” sung at the end by Louis Armstrong, symbolized here by the Eiffel Tower—she misses it. Eventually Kate will embrace her French adventure and learn to live “la vie en rose,” sung at the end by Louis Armstrong, but at this point of the film she is thoroughly miserable. The clashing mismatch between lyrics and visual track—a mismatch that Chion would call “anepistemic” (8)—creates pathos.

Final Thoughts

Dual focus romantic comedies, where the storyline and camera switch from one person to another, automatically imply an all-knowing viewpoint, order, and inevitability. The viewers realize these two beautiful stars belong together, and the narrative structure, in its even-handed portrayal of the complementary opposites, yin and yang, shows us that they will (eventually) fit together to make the complete Taiji circle. This farce and comfort persists even to multiple storyline romantic comedies such as Love Actually; although some of the individual romances don’t work out, the narration’s wide range of knowledge is itself comforting—someone/something has The Big Perspective. Single focus romantic comedies, on the other hand, make viewers more anxious; in a way, these films bring us back to film noir. Like the protagonist we follow, we can’t be sure what is going to happen or when. If lives are not at stake, hearts are.

The prevalence of voice-over in contemporary romantic comedies arises mostly out of a desire to bond us closely as possible to the protagonist, to heighten our emotional engagement and desire. Simultaneously, as shown above, the voice-over is often ironic and funny, allowing the films to eschew sentimentality, wink at the audience with in-jokes, and appeal to both male and female viewers in this cynical age. In Overhearing Film Dialogue, I discuss how screwball comedies strive to sabotage the language of love (1998). These voice-overs are thus the perfect accompaniment for an age of postmodern ambivalence about whether we live as islands, as island chains, or as the adorable, long-devoted elderly couples in When Harry Met Sally...

Note: I'd like to acknowledge the general contribution of the Vassar College students in Spring 2009 Genre: Romantic Comedy, who brought me up to date on contemporary romantic comedies.

What Does God Hear?
Terrence Malick, Voice-Over, and The Tree of Life

“You spoke with me from the sky, the trees, before I loved you, believed in you.” Jack’s (Sean Penn) revelation at the end of the creation sequence in The Tree of Life (2011) could be an apologetic for all of Terrence Malick’s films, especially considering its delivery in voice-over. Since his first film, 1973’s Badlands, Malick has used voice-over in a variety of unconventional ways for a number of different effects. While scholars have often considered the female voice-overs in Badlands and Days of Heaven (1978), the role of voice-over has remained largely untreated in his later three films: The Thin Red Line (1998), The New World (2005), and, due to its recent release, The Tree of Life. In this article, I will chart how Malick’s use of the voice-over has evolved over his filmography, especially in the twenty years between Days of Heaven and The Thin Red Line. I will argue that the shifts in Malick’s employment of the voice-over have created a unique auditory perspective in The Tree of Life, wherein Malick positions the audience in the place of God, able to hear the questions and objections of the soul.

In comparison to Malick’s later films, the voice-over in Badlands and Days of Heaven seems to be a rather conventional narrative device, yet Malick’s decision to filter his stories through the voices of young, female narrators subverts typical notions of voice-over narration. Speaking of both Holly’s (Sissy Spacek) and Linda’s (Linda Manz) narration, Joan McGettigan asserts, “The voice-overs serve more to de-stabilize the discourse than to provide the traditional interiority of character narration” (34). Holly’s seemingly detached voice-over should, in the words of Malick, make the audience “always feel there are large portions of her experience she’s not including because she has a strong, if misplaced, sense of propriety” (Malick qtd in Walker 82). Throughout the course of the film, then, Holly’s voice-over works against audience expectations, making it “a disturbing disjunction between sound and image” that highlights the fallibility and subjectivity of its narrator (McGettigan 35). Here, Malick’s manipulation of the voice-over stands in contrast to the audience’s desire to “embrace the character as principal storyteller” (Kozloff 49). In a similar fashion, Linda’s voice-over in Days of Heaven also challenges audience’s expectations, but does so in an even more complex manner than Holly’s, often undermining the narrative presented to us by the camera.

Certainly, Days of Heaven stuns visually—winning the Oscar for Best Cinematography that year—but on a narrative level, Linda’s voice-over constantly complicates the images presented by Malick and cinematographer Nestor Almendros. Fluctuating throughout the film, her voice-over expresses a number of different views and serves multiple functions, leading us “to re-evaluate what we see and hear…to become conscious of the narrating agency’s presentation of the diegetic world, and perhaps to become suspicious of it” (McGettigan 38). Sarah Kozloff also points to the self-consciousness of Linda’s voice-over, suggesting that “the audience becomes acutely aware that someone else…is actually presenting both the story and the purported storyteller” (116-17). If this is the case and Malick is using Linda’s voice to make us conscious of his role as the director, then we must ask what he is seeking to accomplish by using the voice-over in this manner. I argue that, as his career lengthens, Malick’s voice-overs build upon this self-awareness of a creator, and ultimately, place the audience in a position of an omniscient creator, listening to the transcendent murmurings of the characters.

The voice-overs in The Thin Red Line, The New World, and The Tree of Life depart from the voice-overs in Badlands and Days of Heaven in three significant ways: instead of one voice, we hear multiple perspectives; rather than addressing and often complicating the narrative, the voice-overs contribute to our understanding of the inner state of the
characters; and these voice-overs generally speak from a “timeless present,” not from sometime in the future (Chion 2004, 53). In addition to exploring how these differences form an unusual audio perspective, this discussion can benefit from Michel Chion’s view of the acoustic sound and the voice-over. For Chion, the voice “instantly sets up a hierarchy of perception” in which the listener “always tries to localize and if possible identify the voice,” and when the audience is unable to do so, the voice takes on a mystical quality (1999, 5). When the voice of a character whom we have not seen until that certain point in the film comes off-screen, but remains liable to appear in the visual field at any moment, Chion calls the speaker a “complete acousmêtre,” whereas he attaches the term “already visualized acousmêtre” to an acousmatic speaker who has been previously visually identified (1999, 21). Interestingly, none of Malick’s films contain a complete acousmêtre for their duration, although the later three begin with a complete acousmêtre who is quickly visually identified (1999, 21). Interestingly, none of Malick’s films contain a complete acousmêtre for their duration, although the later three begin with a complete acousmêtre who is quickly visually identified. “The Thin Red Line” opens with shots of nature accompanied by Private Witt’s (Jim Caviezel) voice-over: Pocahontas’ (Q’orianka Kilcher) voice-over invocation begins: “Where do you live?” After another snippet of prayer, his voice-over appears in the mix with the unvoiced question: “Are you watching me?” As we are, quite literally, watching the audience. Unlike those in Badlands and Days of Heaven, the voice-overs that permeate these later three films rarely reflect back on the films’ events from any point in the future. Chion suggests the voice-overs in The New World speak from a “timeless present” mirroring the lack of specificity about how much time has elapsed in each film (2004, 53). This effect is particularly obvious in The Tree of Life, as the voice-overs do very little to situate us temporally in the film’s disjointed structure, turning every episode into a moment of the present. Malick not only shows us events outside of our human abilities to see—the creation of the world, extreme close-ups of nature, the end of time—but allows us to hear thoughts and prayers of the past (and future) in the present: we are in God’s territory. Certainly, this reading is but one facet of the film’s interplay between the past, present, and future, owing to the idea of God being outside of time, most famously advanced by C.S. Lewis: “Almost certainly God is not in Time…[it] is always at Present for Him” (167). Additionally, when the characters address God through voice-over, they almost always use the pronoun “you,” further placing us in God’s auditory position as we are directly spoken to by the characters. All of these factors—multiple voices, lack of narration, and temporality—are emphasized in The Tree of Life, combining to make the film’s voice-overs resonate even more forcefully than those in The Thin Red Line and Days of Heaven.

The Inherent Narrative Force of Malick's Voice-Over

One of the most striking voice-overs in The Tree of Life comes slightly before the midpoint of the film, as the young Jack (Hunter McCracken) is praying; he is kneeling at his bed, struggling to keep his eyes closed, praying in the typical fashion of a twelve year old: “Help me not get dogs in fights. Help me be thankful for everything I’ve got.” Then, his voice-over appears in the mix with the unvoiced question: “Where do you live?” After another snippet of prayer, we cut to a school playground, the camera fluidly weaving through crowds of children, but we still hear Jack’s voice: “Are you watching me?” As we are, quite literally, watching Jack, we can only answer that question in the affirmative. With god-like omniscience we have seen him grow up, and, over the remainder of the film, we will see some of the darkest moments of his young life—secret, shameful moments that no one else experiences. If this question had been voiced in the diegetic dialogue, its power to make us identify with our act of spectatorship would have been lost. Instead, the voice-over’s acousmatic qualities compel us to seriously consider the question in relation to the perspective Malick has given us as the audience. Jack’s next remarks reveal even more: “I want to know what you are. I want to see what you see.” His inner voice carries these thoughts to us—the unseen, all-seeing audience—forcing us to contemplate exactly who we are and what we have seen up until this point in the film. By giving us god-like attributes, Malick seems to be suggesting that the way we respond to Jack’s questioning is, in some minute way, representative of God’s character in the film: silent, creative and, ultimately, compassionate. We are not capable of speaking into the diegetic world, nor can we offer answers to Jack or any of the other characters. We are silent, as God is silent. Jack, however, wants more than just knowledge—he wants to see what we see.

Of course, what we have seen, what we see, and what we will see constitutes a vital part of who we are as the audience, and our participation in this process directly reflects the creative aspect of Malick’s God. As I mentioned ear-
The Voice-Over

also, by not providing a verbal answer from God, alluded to by the film’s epigraph from the Book of Job—“Where were you when I laid the foundations of the earth?...When the morning stars sang together, and all the sons of God shouted for joy?” (38:4, 7)—Malick makes it clear that it is God’s prerogative to provide or withhold explanation for earthly tragedies.

As God’s silence continues, the mother changes her stance in the next voice-over and asks us for something other than answers; she pleads, “Hear us.” As he did when Jack was praying, Malick has conflated our role with God’s, but this effect is more powerful because we have the ability to grant her request. We will spend the rest of the film hearing what these characters are saying, hypothetically listening as God would. With these two words, Malick has given us a function that we can fulfill and, more importantly, asserted that God’s main role is listening, not speaking. Due to our ability to hear the characters and empathize with them, Malick is giving us a glimpse into his conception of God’s interaction with the world. One voice-over in particular, near the end of this film, illustrates this as we hear the father’s (Brad Pitt) only voice-over, a startling admission that God’s main role is listening, not speaking. Due to our ability to hear the characters and empathize with them, Malick is giving us a glimpse into his conception of God’s interaction with the world. One voice-over in particular, near the end of this film, illustrates this as we hear the father’s (Brad Pitt) only voice-over, a startling admission that God’s main role is listening, not speaking. Due to our ability to hear the characters and empathize with them, Malick is giving us a glimpse into his conception of God’s interaction with the world.

In most films dealing explicitly with matters of God and faith, the characters are often waiting for God’s voice to enter into their lives, trying to figure out what God might be saying. The Tree of Life takes a different approach, giving us the other side of the conversation, using the voice-over to place us in the position of God. Although The Thin Red Line and The New World achieve moments of transcendence, they remain temporally conventional, their voice-overs more often connected to what is seen on the screen, not quite reaching the heights of The Tree of Life. Intertwined with dazzling visuals, The Tree of Life’s voice-overs give us a taste of omniscience due to their unique qualities, revealing Malick’s perception of God. By confuting our perspective with God’s, Malick posits that God listens first and perhaps does not speak or intrude on the universe—a silent yet compassionate creator. In this manner, we are able to empathize with the characters through hearing, while we grasp the bigger picture through seeing. It seems to me that Malick’s cinematic approach to issues of religion and God effectively portrays the ambiguity and complexity involved in any form of religious belief without pandering to the audience. In his characters’ search for salvation, Malick does not censor their questions or address their suffering with cliché platitudes; instead, he amplifies their objections and voices by letting us hear the cries of their souls, to which we can offer no respite. While The Tree of Life is a film about characters searching for and questioning the divine, the voice-overs ultimately suggest another, just as important question: what does God hear?

Here we are granted insight into this man’s broken life, usually hidden behind the façade he presents to the exterior world, by listening to his confession.
Most discussions of voice-over narration focus on either third-person “authorial” narrators or first-person “character” narrators. However, Sarah Kozloff argues that, in actuality, there are a “myriad of invisible storytellers” at work in all voice-over films (6). Kozloff, also, pointedly notes that “more than anything else, studying voice-over prompts one to pause over beginnings” (64). Appropriately, then, a critic examining *Skins*, a 2002 film by Chris Eyre, has much to linger over inasmuch as the film opens with not one, but several voice-over narrators. The film concerns Rudy Yellow Lodge, a Lakota tribal police officer who takes care of his alcoholic brother, Mogie, and who must also deal with poverty and Native-on-Native violence and despair every day. During a murder investigation that structures part of the plot of *Skins*, Rudy’s frustration with the justice system, and possibly his possession by the Lakota trickster spider called Iktomi, cause him to become a vigilante. He eventually realizes that this only hurts his own people. Rudy must atone for his misguided actions while learning how to appropriately express his anger, and honour his brother.

In the first four minutes of the film, Eyre uses no fewer than four off-screen voices, including, in order of appearance:

1. Then President Bill Clinton who is actually seen several times but whose voice is used in voice-over, while images of Pine Ridge dominate the visual track;
2. A “voice of God” narrator (voiced by Eyre himself) who provides factual information about Pine Ridge and Lakota history, especially the Wounded Knee massacre;
3. A female news reporter’s voice who also provides statistical information about contemporary life on Pine Ridge, including the shortened life expectancy of Pine Ridge residents and the high unemployment rate on the reservation;
4. The protagonist Rudy Yellow Lodge, a first-person homodiegetic narrator (one within the story world) who informs the viewer about the re-appearance of Iktomi, the Lakota trickster spider, in his life.

While each of these “invisible storytellers” will be discussed in more detail below, their sheer multiplicity ensures that none can occupy an unquestioned position of authority that most voice-over narrators are said to occupy by their very nature. By quickly switching narrators in the first few minutes of the film, Eyre implies that none are in possession of the only true story. As Kozloff maintains about different categories of third-person narrators, “in all cases, one finds that the voice-over highlights the source of the narrative. Instead of the discourse seeming like a translucent pane of glass, such narration makes us aware of the pane’s tint, thickness, and scratches” (74). Eyre is very concerned with making viewers aware of—and skeptical towards—the situatedness of the storyteller, not only in terms of fictional narratives but also the narrative of American history.

As a Native filmmaker, Eyre depicts the history of Pine Ridge and Wounded Knee in ways that contradict triumphalist American narratives of Manifest Destiny and the “winning of the West.” Instead of a white-washed version, Eyre revises American history commemorated in national monuments such as Mt. Rushmore, where he sets the climax of his film, to prioritize a Native perspective. Eyre also

decentres the Western genre, which often mythologizes the histories of the “Old West” and presents Native peoples to mainstream audiences as without history or culture. Beverly Singer notes, “Until very recently, Whites—to the exclusion of Native people—have been the only people given the necessary support and recognition by society to tell Native stories in the medium of film” (2). Eyre is among the first Native people to be able to create counter-images of Native lives in feature-length fictional films; Smoke Signals, released in 1998, was in fact the first all-Native film to receive a wide release from a major American studio. Paul Chaat Smith puts Eyre’s achievement in perspective when he writes, “despite a rich history of Indians in Hollywood, in a real sense, the first Indian films are just now being made” (41). While it is possible to fetishize some sort of purity or complete authenticity in relation to Native-created representations, it is important to also remember that, as Sherman Alexie points out in an interview about Native cinema, the “influences are multicultural” (Capriccioso). Eyre, after all, is telling a Lakota story even though his own heritage is Cheyenne and Arapaho. Such an acknowledgement does not diminish the importance of Native directors creating their own images and narratives to work towards “cultural sovereignty,” a concept detailed by Beverly Singer throughout her groundbreaking book, Wiping the War Paint off the Latino Body. Such films work to counter the objectification and distortions of countless texts made by non-Native directors. Thus, Skins rewrites both American history and film history from a Native point of view.

The film’s forays into this [opening] documentary montage, with its authoritative narrator (the director himself, at one point), borrowed footage, persuasive political agenda, and vérité techniques of location shooting on the reservation in actual homes (not dressed or built for the film), ask that viewers receive this drama differently than the historical fantasies of ‘Indian Westerns’ such as Dances with Wolves (1990), tapping instead into the conventions of social realism. (45)

This documentary-style opening lets viewers know that Eyre will not be parroting myths of American history. In her work on voice-over, Kaja Silverman delineates what she calls the “rule of synchronous sound,” which dictates that the match between the human body and the human voice must appear seamless and thus result in “the representation of a homogenous thinking subject whose exteriority is congruent with its interiority” (132). Silverman goes on to argue that voice-over allows the (almost always) male subject to speak from a transcendental position associated with power and knowledge, and thus, “the disembodied voice-over can be seen as ‘exemplary’ for male subjectivity, attesting to an achieved invisibility, omniscience and discursive power while women are denied this position” (134). Typically, this happens to women who are denied this position, but also people of color. However, early in Eyre’s film, there is a clear reversal of this pattern.

Eyre’s first off-screen voice is then President Bill Clinton, whose voice-over authority is undercut—despite his status as a white, authoritative man—by the way he is shot. The image track is shot and is narrated by several other off-screen narrators, including Eyre himself. We hear part of Clinton’s speech in voice-over while the image track shows shots of Pine Ridge’s landscape and housing; because Clinton is intermittently visible on the image track while his words play asynchronously on the sound track, he is denied the match between the body and voice, as well as the transcendental power of totally disembodied voice-over. Furthermore, Eyre chooses to highlight the part of the speech in which Clinton claims, “we’re not coming from Washington to tell you what to do and how to do it, we’re coming from Washington to ask you what you want to do, and tell you we will give you the tools and the support to get done what you want to do for your children and their future.” While this plays on the audio track, Eyre moves from aerial shots of the area to a series of closer shots that introduce life on Pine Ridge. As Clinton talks about Pine Ridge’s children, two shots depict children playing in front of clearly dilapidated housing. By juxtaposing the official rhetoric of the president with the current realities of the reservation, Eyre critically comments on public officials who promise change and assistance, even as the reservation continues to be one of the poorest areas in the nation. Houston Wood asserts, “the mockery of such oft-repeated official promises then plays across the screen throughout Skins as Eyre’s camera travels the rough roads and visits the mostly rundown houses that act as a character in his story” (31).

In contrast to this ironic juxtaposition of Clinton’s voice with the image track, Eyre himself provides the second, and far more authoritative and factual, voice-over narration. Skins is the first feature film shot on Pine Ridge Reservation, foregrounding its very specific landscape and history that is not memorialized in national myths, but which has instead been too often erased. In the director’s DVD commentary track, Eyre says that although he scouted other locations, he decided it had to be Pine Ridge itself or the story could not be told. However, because he was worried that not all audiences would be familiar with Pine Ridge, the film opens with a voice-over introduction. After Clinton’s speech, the audio track switches to Eyre’s own voice in a documenta-

Eyre uses off-screen voices... to withhold Lakota cultural information from non-Native audiences.

Cinema has a special relationship to the dissemination of triumphantist histories in the form of the many Westerns and other films that gave viewers a distorted yet convenient view of the American past. Yet, film also may have a special ability to begin to correct some of these distortions. While revisionists Westerns like Little Big Man (1970) and Dances with Wolves depict a different view of the past, they were both made largely by non-Natives, and neither treated contemporary
Native realities, thus further encouraging a belief that Native peoples and issues are firmly, though perhaps regretfully, in the past. As Elizabeth Cook-Lynn puts it, “the stereotypes still abound, and the same stories are still being told only in a more sympathetic tenor” (59). However, while Eyre could have simply filled the voice-over position for himself as the right of a marginalized filmmaker speaking back to a long history of Hollywood films, he also undercuts the authority of his own voice-over narration. He is not simply replacing in replacing one authoritative version of events with another; he wants to interrogate any singular account of American history.

Skin’s positioning of Native subjectivity at its centre...is a politically radical act.

The first way that Eyre undercuts the authority of the second voice-over is by immediately following up his narration with a third off-screen voice; that of a news reporter who provides statistics about unemployment and mortality rates from alcoholism on the reservation, while archival footage of Native men being arrested and imprisoned plays on the image track. Furthermore, Bonitzer “believes that we are going to pray for him. Once the men enter the sweat lodge, the image track goes black while the audio track carries the sound of splashing and steaming water, singing in Lakota, and voices talking for almost thirty seconds; meanwhile, Eyre firmly denies the audience any sight of the sweat lodge’s interior.

Eyre uses off-screen voices—in the sweat lodge with no image track at all, and in another case with Rudy’s narration drowning out Mogie’s voice telling Iktomi stories—to withhold the natural information and with it the authority of the voice. Eyre’s discretion makes sense given that decontextualized Native practices are often commoditized and sometimes performed incorrectly, as when James A. Ray, a “New Age guru,” improperly conducted a sweat lodge ritual that resulted in death of three people (qtd. in Kealoha 82). Eyre’s implicit critique of Hollywood films that lure non-Native audiences with buckskin-wearing, leathers-and-feathers romanticized images of “Hollywood Indians” would be weakened if he too commoditized Lakota sacred culture. Furthermore, by keeping his camera outside and at a distance, Eyre preserves the space of the sweat lodge for Native viewers and participants. Eyre also uses off-screen voices in interesting ways to call attention to social issues facing residents of Pine Ridge Reservation. Specifically, Geraldine, the unseen dispatcher whose voice accompanies Rudy in his travels through the reservation, provides important information to the viewer about the calls Rudy responds to, including when Rudy goes to the initial murder scene that will drive the first part of the plot. Additionally, her voice drives home the name of White Clay, which is initially unremarked upon but is persistently repeated on the audio track. While many Westerns lack tribal, historical, or cultural specificity about the Native peoples they represent, Eyre carefully roots his film in a very specific place and context. One of the realities of Pine Ridge life that Eyre documents is the presence of White Clay, an unincorporated town of fewer than 20 people just across the border in Nebraska. Despite its low population, White Clay’s four liquor stores “sell an estimated 4 million cans of beer almost exclusively to residents of the reservation” (Humphrey).

Similar to the opening segment, in which the visual and audio tracks complicate one another, there is a montage sequence very early in the film of Rudy driving through the reservation as Geraldine informs him of various calls he must respond to: a man has fallen out of his wheelchair and needs assistance; a group of drunken teenagers are partying in White Clay; Nebraska State troopers need assistance in White Clay. As these calls, most of which originated in White Clay, come in, the visuals show a montage of decrepit, miserable housing. By juxtaposing these visuals with the name of White Clay, Eyre exposes the relationship between the illegal sale of alcohol just over the border by white store owners and the conditions on Pine Ridge, where death from alcohol-related causes is nine times the national average. Indeed, Mogie eventually dies, not from his burns, but from cirrhosis of the liver.

By making the act of storytelling visible and including multiple voice-over narrators, Eyre encourages viewers to question who, for whom, and from what vantage point is speaking. While many theorists are suspicious of voice-over narration, some, like Bill Nichols, feel that contemporary filmmakers have not only failed to explore the many uses of voice-over in film, but have “disavowed[ed] the complexities of voice” (qtd. in Kealoha 81). Eyre revels in the voices—as shown through his use of multiple off-screen narrators—for its ability to call attention to the act of narrating and storytelling. This enables him to call into question the whole of film history and American history. The final minutes of the film, as silent as the first few minutes are filled with voices, nevertheless are also a critical engagement with Native politics and representations in both film and history. Rather than continuing with his vigilantism, Rudy decides to honour Mogie by throwing a can of red paint down the face of George Washington on Mt. Rushmore, which has been the site of countless film and television moments from Hitchcock’s North by Northwest (1959) to The Simpsons. Rudy’s silent act of resistance and homage to his brother seems to be confirmed when, driving away from Rushmore, he sees what appears to be a younger Mogie. Even though these moments are quiet, the feeling is unmistakably triumphant as Rudy thrusts his arms into the air joyfully after hurling the paint and smiles to himself after seeing “Mogie” again. Furthermore, similar to Rudy’s defiant vandalism of Mt. Rushmore at the end of the film, Skin’s positioning of Native subjectivity at its centre, especially after decades of films representing Native peoples as vilified or exotic Others, is a politically radical act.

Notes:
1. This essay generally follows Chris Eyre’s own customary usage of the term Native rather than other terms such as Indigenous (USA) or Aboriginal (Canada).

The device of the voice-over has generally been examined and analyzed through its use in the cinema of the West, primarily Hollywood, as in the laudable works of Kozloff (1988), Chatman (1975; 1999), and Rascaroli (2008). In this article, I will examine the applications and functions of the voice-over in a classic Chinese film, *Xiaocheng zhi chun* (*Spring in a Small City*, 1948), directed by Fei Mu. The film, largely regarded as a masterpiece in Chinese cinema, represents a rare example of the use of voice-over in Chinese films of that period. I will go on to examine the voice-over in *Spring in a Small City* as a tool or device through which the filmmakers attempt to integrate words with images in the manner of certain poetic techniques in Chinese traditions.

Supposing the simplistic, yet useful (for the purpose of this essay) dichotomy of the Asian film versus Western cinema, the role of voice-over in alloying words and images in Asian films may be even more prominent because of the variety of languages in which the written word takes on both aural and visual significance. Due to the general unfamiliarity of the Western audience and scholarship with Asian languages, from their point of view, Asian films may be perceived to be more visual than aural. In such a biased judgment, the voice-over would seem a strange intervention in the visual scheme of things. Furthermore, although narrative and narration are intuitively and cognitively understood to be universal, the general misconception (even among some Asian scholars and critics) is that, unlike its Western counterpart, the use of voice-over is somehow alien to the cinematic modes of narration in Asia.

No empirical study has been made thus far to determine this hearsay as a fact, and I suspect that there is more generic use of the voice-over in Asian films from Iran to Japan, than is otherwise believed. Asia’s lack of appropriate film theories, sufficient empirical research, and a “voice” in the political sense can be attributed to this misconception. Furthermore, it is certainly the case that many contemporary Asian films employ voice-over, the most well-known examples being a number of Wong Kar-Wai’s films, including *Days of Being Wild* (1990), *Chungking Express* (1994), and *Ashes of Time* (1994). The voice-over in Wong’s films is used in a way that is more in accord with literary narratives; a strategy that we can also see in the voice-over narrations of Stanley Kubrick’s *Barry Lyndon* (1975), and Joseph L. Mankiewicz’s *All About Eve* (1950) and *The Barefoot Contessa* (1954). In this sense, Wong’s films appear to fall into a more familiar line of Western narrative practices. However, if we view Wong’s films as inheriting the narrative legacy of a classic Chinese film such as *Spring in a Small City*, we can then address an imbalance in the discourse on the voice-over created by the overwhelming tendency to equate the voice-over with the Western “voice.”

The sense that voice-over in Asian cinema is somewhat muted can be also due to a Western standpoint that tries to apply its own general principles of narratology and “the language of cinema” to various artistic representations, which might have in fact been derived from more local concepts and traditions. Edward Branigan, in his book *Point of View in the Cinema*, essentially argues that narration “is not a person or state of mind, but a linguistic and logical relationship posed by the text as a condition of its intelligibility” (3). While noting that cinema as a language system has given rise to the debate over “the relation between words and pictures,” Branigan points to the evidence of empirical studies demonstrating “the existence of two processing systems in the brain” that appear to strongly support “the notion that words and pictures do not entirely overlap (and thus neither can be posited as a master system)” (15). But what are the implications of such an improbability in the cinema? I believe that, at the very least, Asian cinemas can provide rich opportunities for answering this question. Asian cinemas express linguistic systems that are historically and culturally determined (and needless to say, quite different from linguistic systems in the West), and because there is a gap in this area of research, it remains to be seen how various Asian languages, as expressed through film, can ac-
In the Chinese cultural and literal tradition, words and paintings are said to belong to the same source, which is to say that words and images are indelibly linked together. This was one of the maxims in *Youneng ying* (Quiet Dream Shadows), a book of aphorisms by the Qing Dynasty scholar Zhang Chao (1650-1707), parts of which have been translated into English by Lin Yutang (Lin 36-74).

The traditional Chinese correlation of words and images shows itself in the pictorial-based language too, where individual Chinese words take on the look of iconic images. Chinese calligraphy is an art form in itself, akin to painting; indeed, both painting and calligraphy use the same techniques. Chinese painters often include words in their works, and both these words and images exist in the same space without distracting from each other. Given the cultural tendency that words and images flow out of the same source, Chinese films may, in fact, have an inherent signifying linguistic system of their own. However, to consider this trait, we need to set it off against the discourse in Western theory, which, as Braunig has informed us, allows “room to argue for a fundamental difference between words and pictures” (15). Such a difference may be culturally determined, as Western scholars themselves argue. Sarah Kozloff reminds us that “the dominant tradition of Western culture has tended towards iconophobia, and that ‘the stridency of the pro-image film scholars may be in defiance against this dominant tradition, a quasi-conscious revolt against the traditional favoring of the abstract, intellectual word’” (11). With such a cultural background of iconophobia, it can be argued that in the context of film theory as formulated in Western scholarship, the voice-over is an intrusion into the narrative flow that posits a separation of words from images. This is contrary to the expectation in Chinese cinema that words and images can flow in tandem.

One method proposed for explaining this agreement in Chinese cinema (and one that we can benefit from for studying the role of voice-over in this issue) is the mode of poetic expression in traditional Chinese poetry. By employing the techniques of *fu* (exposition), *bi* (contrast or metaphor), and *xing* (evocation, but sometimes also translated to mean metonymy), Chinese poets engender an effortless melding of words and images. These literary techniques have been applied to Chinese film criticism. The Hong Kong critic (and sometime filmmaker) Lau Sing-Hon (Liu Chenghuan) has been a long-time proponent of applying Chinese poetic modes of *fu*, *bi*, and *xing* to Chinese film, and indeed, to film in general (Lau 3-43), but there has not been much English-language scholarship on how such poetic modes function as a formal construct of Chinese film theory. The example that I will use, Fei Mu’s *Spring in a Small City*, is often described by Chinese critics as “poetic,”

In its poetic utterance, *Spring* effectively distills both *fu* and *bi* techniques to evoke *xing* imagery. Essentially, poets, literary or cinematic, will strive to achieve *xing* which constitutes the peak of poetic expression; therefore, both *fu* and *bi* are considered less vital poetic techniques. The poetic force of *Spring* is arguably a consequence of its summation of *xing* as a subtle, yet palpable conceit. *Xing* embodies the sophistication of the narrative. Many commentators, such as Wei-Qun Dai and Hongchu Fu, have singled out *xing* as the most controversial and least comprehensible element in Chinese poetry. In the same way, inasmuch as we regard *Spring* in a *Small City* as the cinematic equivalent of poetic *xing*, considering it as an effect might be more useful than trying to describe it. Each scene is an epiphenomenon of *xing* affect. Apparently, the director Fei Mu had instructed his screenwriter Li Tianji to revise the script according to the tone and feeling of a poem by Song Dynasty poet Su Dongpo, *Die Lian Hua* (The Butterfly’s Romance of the Flower) (Zha 62). This poem is essentially composed of *bi* and *xing* parts, with a downbeat articulation of *xing*. Fei Mu had probably intended for his film to capture the kind of *xing* expression and mood that the poem encapsulated. That the conceit works in *Spring* is due to its use of a subjective voice-over narration, which enhances the sensation of poetic utterance. The voice-over, as a vehicle of poetic distillation of the *fu*, *bi*, and *xing* techniques, should hence be considered a functional outgrowth of the poetic nature of the film. Naturally, Fei Mu’s method of poetic utterance relies on his use of specific cinematic techniques other than the voice-over narration, including, for example, his signature long takes and dissolves. A closer look at the way these techniques have been used to convey the poetic character of the film (as a classic example of the linguistic and logical relationship of words and images in Chinese cinema) is necessary here.

*Spring* begins with exterior images of a woman walking alone through the ruins of a mansion; her home, destroyed by the war between Japan and China. We hear her voice-over narration, gradually introducing all the characters in the film: her servant, her sick husband, her sister-in-law, and a doctor friend of her husband (and her own ex-lover) who turns up at the mansion unexpectedly. The woman’s voice-over makes her the focalizer of the narrative, the subject of her localization being her relationship with Asians have not lacked a voice culturally, but this voice may not always be heard in the West. An early example is the Japanese *benshi* of the silent era who were employed to narrate and explain the plots of the movies. The *benshi* became cultural performers and were considered stars in their own right. Although, in a sense, the *benshi* presaged the arrival of sound in cinema, because of their power and cultural influence, they actually hindered the start of the Western scholarship, the voice-over is an intrusion into the narrative flow that posits a separation of words from images. This is contrary to the expectation in Chinese cinema that words and images can flow in tandem.

One method proposed for explaining this agreement in Chinese cinema (and one that we can benefit from for studying the role of voice-over in this issue) is the mode of poetic expression in traditional Chinese poetry. By employing the techniques of *fu* (exposition), *bi* (contrast or metaphor), and *xing* (evocation, but sometimes also translated to mean metonymy), Chinese poets engender an effortless melding of words and images. These literary techniques have been applied to Chinese film criticism. The Hong Kong critic (and sometime filmmaker) Lau Sing-Hon (Liu Chenghuan) has been a long-time proponent of applying Chinese poetic modes of *fu*, *bi*, and *xing* to Chinese film, and indeed, to film in general (Lau 3-43), but there has not been much English-language scholarship on how such poetic modes function as a formal construct of Chinese film theory. The example that I will use, Fei Mu’s *Spring in a Small City*, is often described by Chinese critics as “poetic,”
The woman’s voice-over in *Spring* links the narrative with images, sometimes in a redundant fashion (i.e., the words merely repeat what is shown on screen), and sometimes as a counterpart to the images. The voice-over acts as a crucial determinant of the poetic flow in *Spring*. In the middle section of the film, there are several passages where the narrator is utterly absent, but the images retain a certain sense of being shaped by the now-absent narrator’s authority. The poetic current of the narrative is an effect of the narrator’s previous voice-overs which shift from first-person to third-person, making her presence all the more omnipotent and therefore omnipresent. The power of the narrator lingers over those scenes where her voice is no longer heard. Fei Mu achieves this effect by his skilful use of dissolves in many of the scenes where the narrator is absent.

Ultimately, the voice-over in *Spring* is an attempt by a Chinese filmmaker to integrate not only words with images, but also an old Chinese poetic method (the connotation of *xing* imagery) with the more recent and originally Western art form of the cinema. In this attempt, the voice-over acts as a generic tool, carrying nuances of Chinese form and methodology of expression (the poetic modes of *fu-bi-xing*), while the visual technique of dissolve acts as another generic tool, helping the natural flow of images be coordinated by words. *Spring’s* achievement is perhaps unique in that the film is still considered to be a rare case of a highly literate representation of poetic form in Chinese cinema. Despite their seemingly conscious ‘poetic’ force, other Chinese breakthroughs, such as the films of the Fifth Generation or the Taiwanese “New Cinema” in the 1980s, are not as literate as this classic voice-over film. Endowed with a “Chinese voice” by the poet-director Fei Mu, *Spring* will remain as a classic example of a generic fusion between the cinemas of the West and the East.

**If we consider cinema as a poetic form, we might then say that words and images are juxtapositions in a metonymic flow.**
Alexander Fisher

Voice-Over, Narrative Agency, and Oral Culture
Ousmane Sembène’s *Borom Sarret*

The voice-over—one of the most overtly “oral” aspects of cinematic enunciation—accrues a particular significance when considered within the context of films originating from historically oral cultures; the presence of voice-over in such films would appear to be the most obvious point of intersection between the modern cultural form of cinema and the ancient tradition of oral performance. Ousmane Sembène’s *Borom Sarret* (Senegal, 1969) presents a special case in this regard: widely regarded as the first sub-Saharan African film, the film’s use of a first-person voice-over invites comparisons with the voice of the *griot*, the traditional oral performer in West African cultures.

However, *Borom Sarret*’s voice-over is exposed as the voice of an unreliable narrator whose bias, shortcomings, and prejudices are emphasized via the unusual relationship of his vocal narration to the other sounds and images in the film. Through this relationship, *Borom Sarret* constructs and renders visible another narrator that has far more authority than the subject heard in the voice-over. Sarah Kozloff points out that “…behind the voice-over narrator there is another presence that supplements the nominal narrator’s vision, knowledge, and storytelling powers. This presence is the narrating agent of all films (with or without voice-over)” (44). In *Borom Sarret*, the presence of this cinematic narrator is emphasized, while in classical (Hollywood) cinema it is rendered invisible. It is the god-like third-person *cinematic narrator* that recalls the autonomous narrator in some African oral performances, the *griot*. This cinematic narrator, operating behind the protagonist’s voice-over, confides in us, and persuades us to appreciate the ironies and contradictions of the protagonist’s social predicament.

Within a highly economic running time of 19 minutes, *Borom Sarret* manages to articulate a complex critique of the urban poverty prevalent within postcolonial African countries, emphasizing its psychological effects. This is achieved through the first-person, interior monologue of Modou (Ly Abdoulay), a cart driver or *borom Sarret*; a term which, according to Murphy, is a “Wolofisation” of the French term *bonhomme charette* (52), meaning the wagoner. Throughout the film, while undertaking his routine morning’s work driving fellow citizens around Dakar in his horse-drawn cart, the protagonist expresses his thoughts and feelings in voice-over. As the morning unfolds, the protagonist Modou runs errands for a range of local characters, and meets a professional *griot* who persuades him to part with his earnings by singing his praises. Towards the end of the film, a well-dressed person convinces Modou to drive him to the “plateau”, the exclusive high town where the *sarrets* are not allowed. Once reaching the destination, Modou is accosted by a policeman who confiscates his cart, while his passenger flees without paying his fare. Returning to his family in the low town without his cart, and thus without his livelihood, the protagonist’s monologue asks who is responsible for this misfortune.

As with many of Sembène’s works, *Borom Sarret* is often didactic in tone, a characteristic which itself invokes questions about oral narrative techniques. Sembène famously saw himself as fulfilling a role akin to the *griot* (although he himself was not of *griot* lineage) and described himself as a “griot of modern times” (Pfaff 29). Moreover, *Borom Sarret* reflects Sembène’s self-confessed commitment to the cinema as a tool for mass education, summarized in his statement, “cinema is an evening class for the people” (Sembène 184). Indeed, the director was known to tour his films around West African villages that lacked facilities for film exhibition, thus exposing his political ideals to as wide an audience as possible. Amadou T. Fofana, too, suggests that *Borom Sarret* is “a griot’s narrative,” and emphasizes the didactic role Sembène occupies as director: “As a *screen-griot*, he overpowers the corrupted role of the un-
It is the god-like third-person cinematic narrator that recalls the autonomous narrator in some African oral performances, the griot.

of a film like Borom Sarret, whose prominent use of voice-over brings the issue of oral performance to the fore. Undertaking a close analysis of the film reveals the norms of oral performance in the formal relationships between the voice-over and other forms of diegetic speech, music, and ambient sounds. Thus, the remainder of this essay attempts to delineate the ways in which the voice-over in Borom Sarret operates as part of a reconfiguration of the enunciative strategies of oral performance.

The starting point for this analysis is Manthia Diawara's inspining work on the relationship between filmic enunciation and African oral performances. In his examination of Idrissa Ouedraogo's Tilai (The Law, Burkina Faso, 1990)—one of the films of a wave of African films that attempted to represent a "precolonial" Africa—Diawara argues how the visual characteristics of the film (the static camera, in this instance) may inscribe the oral performer at the level of cinematic enunciation. Elaborating an argument he first made in relation to Kaboré's Wend Kuuni (Burkina Faso, 1983) in "Oral Literature and African Cinema" (1989), Diawara discusses how the climactic scene in Tilai distances the spectator from the characters' psychological predication, referring the viewer, instead, to the narrator's presence:

At the end of the film, the poetic way in which Koubri picks up the rifle and shoots Saga brings together film history and the African oral traditions. Because the camera is static and the acting looks clumsy, the shot reminds us of early cinema. But the distance between the characters and the spectator, the refusal to let the spectator into the characters' minds, is also a trait of the oral traditions. We know that we are being told a story by a third-person (the griot or the filmmaker), and every shot must be negotiated through that narrator. (164)

Diawara demonstrates how the static camera calls attention to the film's discourse and, in turn, the cinematic narrator recalls the griot's narrative strategies. Clearly, for Diawara, an indicator of oral narration is the storyteller's tendency to draw attention to the act of narration itself, and these characteristics may be refracted at the visual level. In Borom Sarret, however, this refracting of the oral performer's techniques occurs at the aural level. While the subject of the film's voice-over, that is, the protagonist, cannot be likened to the African griot (since he does not possess the social status of a griot), the formal organization of the voice-over, and in particular, its interaction with other aspects of the soundtrack, recalls the griot's emphasis on the act of storytelling itself. This strategy allows Sembène to articulate his didactic narrative for the rural audiences to whom he exhibited his films—audiences well-versed in African oral aesthetics. Indeed, when taken as a whole, the various "voices" in the film (spoken voice-over, dialogue, diegetic sound and music) coalesce to create a kind of tone poem whose rhythmic organization and internal logic signal the presence of the cinematic narrator.

Employing the dubbing technique pioneered in the ethnographic films of Jean Rouch (who himself was compared to griots by Paul Stoller), Sembène shot Borom Sarret without synchronous sound. This choice gave him the flexibility to take his camera on location, and add all the dialogue and other sounds at the post-production stage. As a result, all of the actors' voices heard in the film are, in effect, forms of voice-over, and Sembène makes little attempt (for either artistic or technical reasons) to disguise this fact. Therefore, while Sembène's camera is firmly located in the centre of a poor district of Dakar, the sense of documentary realism evident in the visuals is not actually reflected in the soundtrack. Having only a few scenes with the ambient hustle and bustle of the street, the soundtrack is dominated by a set of fundamental sound types: diegetic and non-diegetic speech (Modou, the griot, the passangers, a Muezzin's call to prayer); music (Senegalese folk music played on sabar which is a small lute often played by griots, European baroque/classical music); and sound effects (the horn's hooves, the bells and squeaking wheel on Modou's cart, the policeman's whistle).

The close interaction of these various dimensions of the soundtrack roots the protagonist's dialogue within the material reality of his social circumstances, and constantly reminds us how these very circumstances shape his verbal reflections on the urban surroundings. At the same time, there are barely any variations in the timbre of the different elements of speech; all the diegetic and non-diegetic voices heard are recorded in a similar fashion, whether they are part of the on-screen spoken dialogue, or the interior monologue that dominates much of the film. As a result, it can be difficult, upon first viewing, to distinguish between the dialogue spoken within the film's diegese and the borom sarret's voice-over. This blurring of diegetic and non-diegetic voices undermines the illusion of dramatic realism sustained within the visual dimensions of the film, constantly calling attention to the discursive process of the cinematic medium, and in turn, the cinematic narrator.

The precise manner in which the film signals this narrator may be understood via Mary Ann Doane's work on the use of the voice in relation to space in the cinema. Recalling the three "looks" of cinema determined by Laura Mulvey, Doane considers how the voice operates in relation to the three types of cinematic space: the diegetic space, the visible space of the screen as receptor of the image, and the acoustical space of the theater or auditorium (39). Do-an continues by pointing out that "(different) cinematic modes—documentary, narrative, avant-garde—establish different relationships between the three spaces" (40). Just
Borom Sarret achieves this transgression via its voice-over’s unstable situation within the heterogeneous soundtrack.

Here, the voice-over undermines the illusion of the diegetic space by drawing attention to the second and third spaces, which, in turn, reveal the process of cinematic narration in a manner that recalls the self-conscious narrative strategies of the griot. Kristoff asserts that “films often create the sense of character-narration so strongly that one accepts the voice-over narrator as if he or she were the mouthpiece of the image-maker either for the whole film or for the duration of his or her embedded story. We put our faith in the voice not as created but as created” (45). In Borom Sarret, the unmasking of the cinematic process spotlights the cinematic narrator—not the first-person voice-over narrator—as the (griot-like) author-god of the film. In this sense, the film consciously undermines the spectator’s tendency to accept the voice-over as the voice of the film author, signaling the existence of the film’s authorship in a space beyond the voice-over.

Borom Sarret’s voice-over belongs to a protagonist who is clearly a social type as opposed to a complex character. This is established during the film’s opening sequences, in which Modou’s monologue determines an overt, heightened relationship between the protagonist and his social environment. Travestising what is clearly a familiar path, Modou offers a series of reflections on the individuals he meets on a daily basis. We learn that a regular puruer never pays for his lifts, offering only a handshake. Later, Modou admits that he ignores beggars, demonstrating a necessary social indifference that, nevertheless, both accentuates and belies his own destination. At points, Modou’s prediction of the events we are about to see demonstrates their routine nature (such as the recurring fare-dodging handshake), but it also allows the protagonist to “confide” in the audience, allowing him an apparently free route of expression and providing an uninhibited outlet for his own observations regarding the world around him. However, any confidences shared are in fact moderated by the interplay between the voice, the music, and ambient sounds, constantly reminding us that this protagonist is Sembène’s construction; a social type who enables the film’s critique of modern-day Africa. Early on in the film, Modou’s observations are accompanied by repetitive music, performed on the salem, which forms an insistent presence on the soundtrack. Played to a beat of three, the music is sometimes accompanied by the squeak of the cart’s broken wheel, which creates a kind of cross-rhythm (a rhythmic construction idiomatic of numerous forms of traditional West African music). Modou’s voice-over sits at the top of these sonic layers; a position that seems to imbue the voice, ultimately calling attention to the presence of the didactic griot-like narrator.

Having consistently undermined the conventional uses of the voice in the first three-quarters of the film, Borom Sarret then transgresses its own formal pattern via two further shifts in the use of sound. The first disruption occurs once the protagonist agrees to visit the plateau. Here, the eclectic soundtrack gives way to a rather pompous orchestral arrangement of the “Bourrée” from Handel’s Flute Concerto Op.5 No.1 (mistakenly attributed to Mozart in several analyses of this film). As Handel’s take on the seventeen-century French dance is heard over an aerial pan of the wealthy neighborhood, the voices of the film’s characters momentarily disappear, giving way entirely to the cinematic narrator, whose presence is now generated through the somewhat sardonic four-way comparison between the low town/salem music and the high town/baroque music. As the strains of Handel are faded low into the mix, Modou’s voice-over returns, praying to God and the saints for protection. The music then fades out completely and the familiar pattern of the cart’s squeaking wheel and bells returns; drumming is then heard briefly, until all these sounds are brought to a stop by the punctuation of the policeman’s whistle; a shrill, disconcerting and pragmatic sound which marks the troubling reality of Modou’s predicament. Following the confiscation of his cart, the protagonist returns to the low town and reflects on the misfortune he has encountered during the morning. At this point, a further abrupt (and surprising) transition of narrative voice occurs.

Having led us to believe that the European music represents the plateau, Sembène then introduces an emotive orchestral rendition of Mozart’s “Ave verum corpus” to accompany Modou’s monologue. By this point, the monologue has become emotional and highly personal, in contrast to the indifferent tone that marked Modou’s earlier observations. The music also encourages the spectator to empathize with the protagonist as an individual, and as a result, his typical aspects are undermined. This is achieved via a departure as Mulvey demonstrates how classical cinematic discourse attempts to disguise the “look” of the viewer and the “look” of the camera, leaving only the diegetic characters’ looks at each other (248). Dose points out that,

The classical narrative film … works to deny the existence of the last two spaces in order to buttress the credibility (legitimacy) of the first space. If a character looks at and speaks to the spectator, this constitutes an acknowledgment that the character is seen and heard. As the camera, leaving only the diegetic characters’ looks at and speaks to the spectator, this constitutes an acknowledgment that the character is seen and heard. This relationship between the voice and the other characters momentarily disappear, giving way entirely to the aesthetic component of the soundscape, carefully assembled by Sembène throughout the course of the film. The effect is heightened by the fact that the griot performs in Wolof (the principal native language in Senegal) and his words are mediated through the Borom Sarret, whose interior monologue provides a French translation of his own inference of the griot’s words. This tells the protagonist that he is of noble lineage, and that although he may be enslaved in his current life, he will always be safe in the knowledge that noble blood runs through his veins. Bowled over by this, Modou gives him all his money, and goes back to his cart empty-handed. The voice-over’s dual function, as an aesthetic aspect of the film’s soundscape and as an articulation of the protagonist’s inference of the griot’s persuasive performance, reifies the point that more than an individual character, Modou is a social type in the service of a didactic purpose. Because of Modou’s inference of the griot’s performance, he is exploited. The interaction of speaking positions presented here serves to explore the range of social forces exerted on the protagonist, and the social injustice he represents. Moreover, the distancing effect achieved by the voice’s emancipatory incorporation within the overall soundscape continues to unmask the second and third spaces of the voice, ultimately calling attention to the presence of the didactic, griot-like narrator.

Having consistently undermined the conventional uses of the voice in the first three-quarters of the film, Borom Sarret then transgresses its own formal pattern via two further shifts in the use of sound. The first disruption occurs once the protagonist agrees to visit the plateau. Here, the eclectic soundtrack gives way to a rather pompous orchestral arrangement of the “Bourrée” from Handel’s Flute Concerto Op.5 No.1 (mistakenly attributed to Mozart in several analyses of this film). At this point, a further abrupt (and surprising) transition of narrative voice occurs.

Having led us to believe that the European music represents the plateau, Sembène then introduces an emotive orchestral rendition of Mozart’s “Ave verum corpus” to accompany Modou’s monologue. By this point, the monologue has become emotional and highly personal, in contrast to the indifferent tone that marked Modou’s earlier observations. The music also encourages the spectator to empathize with the protagonist as an individual, and as a result, his typical aspects are undermined. This is achieved via a departure...
from the transgression that called attention to the second and third spaces of the voice, and a return of sorts to the conventions of classical cinema. Disguising the marks of the cinematic narrator, Mozart’s strains emphasize the dramatic impact of the protagonist’s words. The order of the film’s soundtrack is then partially restored upon Modou’s return to his home in the low town, as the predominant sounds, marked by the xalam, return (without the squeaking cart wheel, of course) and the protagonist faces the practical reality of feeding his family.

Having called attention to the second and third spaces of the cinematic voice throughout the film, Sembène deploys the conventional disguise of these spaces in the end as a transgressive aesthetic strategy in itself. The effect is to promote a dual function for the character of Modou; as a social type standing for the millions of destitute individuals in postcolonial Africa, and as an individual experiencing intense emotion in the face of poverty and injustice. Modou, finally, finds his own personal voice.

Borom Sarret’s transgressive and self-reflexive voice-over should be seen in the context of a cinema so closely associated with oral cultures. Through refiguring and appropriating the norms of both classical (Hollywood) cinema and African oral narration, the (third-person) cinematic narrator behind Modou’s voice-over acts as a griot-like agency within a diverse range of sonic strategies throughout the film. In this context, our understanding of the voice-over and the issue of “who speaks for whom” must take account of African cinema’s self-conscious location within the fissures between various oral traditions of the continent and a modernized, industrial culture.
